Mobile App Developer – Android (1-year Internship)

Your role with us involves:

- Responsible for Android applications design, testing and development
- Working closely with UXUI, Product Management, and QA teams to deliver the best-in-class user experience
- Analyze user requirements and ensure output is on industry standard
- Focus on user needs and provide the appropriate solution
- Conduct unit-test for robustness, including edge cases, usability, and general reliability
- Take the challenges to conduct the R&D / POC on new technologies

Requirement:

As an employer, our role is to empower you by bringing your true talents and best self to this dynamic digital world and people we serve. We welcome individuals from all backgrounds, ideally with skills and traits as below:

- Diploma or above in Computer Science, Information Technology or related disciplines
- Hands-on experience in Kotlin and Java for Android SDK
- Familiar with Android Framework like Dagger, RxJava
- Knowledge in web technologies, hybrid mobile app development method like Flutter would be an advantage
- Experience in handling JSON and RESTful APIs integration
- Good understanding of OOP and Design Patterns
- Tech-savvy and willing to share new technical knowledge
- Great team player, work independently and with a strong sense of responsibility and self-motivated
- Strong communication skills in Cantonese and English
